Paragraphs contain text and may contain inline markup: *emphasis*, **strong emphasis**, `inline literals`, standalone hyperlinks (http://www.python.org), external hyperlinks (Python), internal cross-references (example), external hyperlinks with embedded URIs (Python web site), footnote references (manually numbered[1], anonymous auto-numbered[2], labeled auto-numbered[3], or symbolic[4]), and substitution references (☣). Character-level inline markup is also possible (although exceedingly *ugly!*) in *re*StructuredText. Problems are indicated by |problematic| text (generated by processing errors; this one is intentional).

The default role for interpreted text is *Title Reference*. Here are some explicit interpreted text roles: a PEP reference (PEP 287); an RFC reference (RFC 2822); a $_{subscript}$; a ^{superscript}; and explicit roles for *standard* **inline** `markup`.

- A bullet list

- Nested bullet list
- Nested item 2

- Item 2
  Paragraph 2 of item 2

  - Nested item 3

---

[1] A footnote contains body elements, consistently indented by at least 3 spaces.

[2] This footnote is numbered automatically and anonymously using a label of "#" only.

[3] Footnotes may be numbered, either manually (as in [1]) or automatically using a "#"-prefixed label.

[4] Footnotes may also use symbols, specified with a "*" label.
